

Steps to Create Git Repository and Folders

1. Go to GitHub (<https://github.com>) and log in to your account.
2. Click on the '+' icon at the top right corner and select 'New repository'.
3. Enter the repository name as your enrollment number: 2302031800039.
4. Choose the repository visibility as Public or Private based on your preference.
5. Click on the 'Create repository' button.
6. After creating the repository, click on the 'Code' tab.
7. Under the Quick Setup section, click on 'creating a new file'.
8. In the file name field, type 'Assignment_1/README.md' to create a folder named 'Assignment_1' with a README file inside.
9. Scroll down, enter a commit message like 'Created Assignment_1 folder', and click on 'Commit new file'.
10. Repeat the same process to create another folder named 'Assignment_2' by typing 'Assignment_2/README.md'.
11. After both folders are created, your repository is ready.
